1. List of Gen Ed Courses:

   AF AM 201

   ECON 101

   PYSCH 101

   PYSCH 230

2. My current short term goal is graduate Iowa State with honors. Also, to buy a house and to work hard and get things done. My current long term goal is to advance in my career and become manager.

   Lots of engineering problems have ethical and moral obligations. If I make this change will it cost less or more, if I make this change will it only affect a select group of people. General education have helped to widen my ethical and moral understanding that I can apply to solving engineering problems.

   In an application there are lots of technical things to consider. How can I make this work? How can I get this done in the week that I have? Beyond that there is the question of economical obligations. For an example if I have the choice to save battery life or RAM which may make the application be able to run on older phones. As a pure engineer I may not think about people who want to use my application but cannot afford a newer phone, so that it will run optimally. General education has helped me see that there are people who may not afford newer phones and I can positively impact the societal value of my application by making it run better on older phones.
